## 007 Systems Press Release

**007 Systems is proud to announce two new product releases and an update to two of our best sellers.**

As you know, our products make it easy for you to install our Security Access Consoles just about anywhere. But with our new Products it is easier than ever to install our great looking SAC's. If that weren't enough after a long search, we have found a great looking call switch replacement and an illuminated call switch option to make your SAC's look even more spectacular.

We are now pleased to announce that after months of searching we have two new gorgeous stainless steel call switches.

The first is to replace our standard stainless steel call switch. The new stainless steel call switch which will be standard in all of our SAC's has wire screw terminals on the back and the front surface is polished to really give our SAC's an elegant

look.

The other is our first illuminated call switch. It is truly a gorgeous switch. It will be sold as an upgrade option to our standard call switch. It is made of stainless steel and has an illuminated ring surrounding the push button but inside the collar. The illuminated ring is a white light and really stands out at night. It really looks good. The illumination is LED powered and the kit comes with a 12v 500ma power supply and connectors. If a camera is installed in the SAC, you can use one power supply for both the camera and the illuminated call switch. The illuminated switch is both normally open and normally

closed and has connectors on the back for either connection.

Both switches;

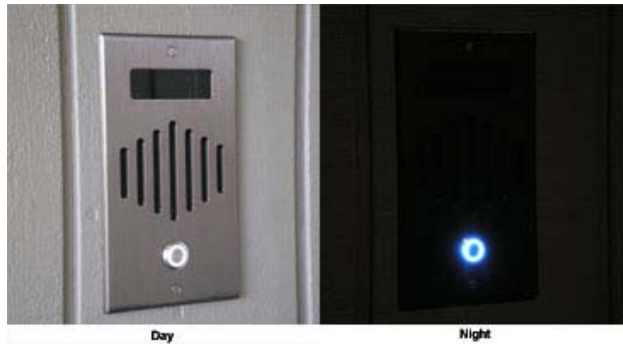

- Are sealed to a rating of IP65 meaning they are sealed from dust, moisture and low pressure water jets.
- Come with a nut, O ring gasket and the illuminated switch has wire connectors and a power supply.
- Have a 100,000 cycle life.
- Are vandal resistant.
- Have an operating temperature range of -20C to 55C (-4F to 131F)
- Are easily replaceable.

Dealer pricing for our new switches are as follows:

SWSS-SPST = Switch Stainless Steel Free when included with SAC (If your buying it separately, it's 9.99 US\$)

SWSSI-SPDT = Switch Stainless Steel Illuminated 24.99 US\$ (If your buying it separately, it's 34.99 US\$)

We also have designed and released a brand new rough in box (RIB300) and modified our existing RIB200.

Our new rough in box is the RIB300. It is a really tough box built with extra thick steel with knockouts, rain shield and is powder coated for those tough weather extremes. It is powder coated with a black crinkle coat and is designed to be installed partially submerged into a concrete, block or brick wall. It also has knockouts on both sides and the bottom for easy attachment to conduit.

We have redesigned our RIB200 to now be 5" deep. Most applications were requiring a less deep box so we have made this change from our old boxes at 7" deep. They still have the knockouts for easy attachment to conduit. Now you should have no problem installing this box in almost any application.

Dealer pricing for our new RIB's are as follows:

RIB200 = Rough in Box 200 for concrete walls 39.99 US\$

RIB300 = Rough in Box 300 for concrete walls with rain shield  
69.99 US\$

We still have or other great rough in boxes.

RIB100

SMB100

Thank you for taking the time to read our press release. If you have any questions about our current or new products, please don't hesitate to call us.
